INTRODUCTION

The National Campus Climate Survey (NCCS) was developed to help universities and colleges cultivate their campus communities. The NCCS assists initiatives that support an inclusive living, learning, and working environment by collecting data that inform university administration and staff about student experiences with sexual misconduct, as well as their knowledge of campus resources and support services and their views on general campus climate.

The NCCS particularly contributes to the conversation around campus sexual assault by informing ongoing campus efforts to prevent sexual misconduct and violence; enhancing support for victims and survivors when incidents occur; and learning where gaps in knowledge of resources and reporting options exist among students.

Additionally, the study was designed to:

- **Meet state and federal requirements** for campus climate and similar surveys.
- Provide a **scientifically rigorous and useful survey**.
- Provide **survey implementation strategies** that match institutions’ varying needs for defensible data.
- Provide a **benchmarking tool** for institutions looking to evaluate change over time or between their campus and others.

This report summarizes the methodology and results of the NCCS study conducted in Spring 2019 for the University of New Mexico.

Report Intention & Target Audience

The NCCS team has developed this standardized report to facilitate rapid dissemination of the findings. Our intention is to present the key results that we understand most institutions wish to see. We have developed this report as a starting point for institutional administrators.

This report is not fully customized to reflect local context that may be relevant to fully understand these findings. Each participating institution must bring its local context together with these findings to develop a more complete understanding of the story that they tell.

Participating schools may use this report in any manner that is effective for their intended purposes of the study. This report may be used to publicly present study results, or it may be a first look at the data that is used in the preparation of a more in-depth and school specific interpretation of the results conducted by the institution. This report is provided as one of many tools to be used as each institution sees fit.
Explicit Language Warning

This report uses explicit language, including anatomical names of body parts and descriptions of sexual situations and acts. These situations include sexual misconduct, broadly defined to include nonconsensual (also known as unwanted) kissing and touching; oral vaginal, or anal penetration; and sexual harassment. Reading this report might remind you of experiences that you, friend, or family member have gone through. If you would like to talk to someone confidentially about questions or concerns relating to sexual misconduct, including sexual assault, please contact one of the following resources.

Confidential Resources

The following resources were presented in the consent form and within the respondent communications and survey as resources available for students if they felt they needed assistance at any time.

- LoboRESPECT Advocacy Center: 505-277-2911
- **National Sexual Assault Hotline**: 800-656-4673
The National Campus Climate Survey (NCCS) was developed via a collaboration between SoundRocket and the University of Michigan (U-M) Survey Research Center, both located in Ann Arbor, Michigan. The survey design process originated when the University of Michigan decided to implement a campus climate study in 2015. After implementing the survey at U-M and analyzing results, the questionnaire was adjusted during preparation for the Spring 2016 administration with input from two other schools to ensure its veracity for use in multiple institutions.

The survey is comprised of five sections: (1) Background, (2) Campus Experiences, (3) Campus Resources, (4) Sexual Experiences, and (5) Unwanted Experiences. The survey concludes with a thank you screen and information about the incentive(s) being offered to respondents in gratitude for their time and input.

Due to the sensitive nature of the survey, responses were not required for any of the survey questions – except for the consent question; if an individual did not consent to participate, they were not shown subsequent survey questions. Because participants could choose to skip any questions they did not wish to answer, the number of respondents in data tables varies by question.
METHODOLOGY

The NCCS is administered as an on-line web survey; the survey is optimized so that it can be completed successfully on mobile devices and tablets, as well as on desktop or laptop computers. Mobile optimization is implemented dynamically during the survey when the system detects that a mobile-sized screen is in use.

Student Sample Eligibility

To ensure consistency and standardization of the NCCS across schools, the population of study for the NCCS is defined as any full or part-time graduate student who is at least 18 years old and is enrolled at a participating school at least as of February 2, 2019.

Schools are asked to provide a list of eligible students based on these criteria; this may be the entire student population, a randomly selected sample, or a frame from which the NCCS selects the sample.

UNM provided a list of 5656 students who were enrolled at UNM as of February 2, 2019.

During the preparation for and during the course of data collection, individuals who are not eligible to participate may be identified. This may be the result of duplicates, undergraduate students, students who were not enrolled, or students who were not 18 years of age as of February 2, 2019. When those cases are identified, the NCCS discontinued data collection efforts and flagged the case as ineligible.

After removing 1 ineligible cases identified in the UNM sample, a remaining eligible sample of 5655 was included.
Respondent Communications

The following survey communications were emailed to potential participants during data collection:

<table>
<thead>
<tr>
<th>Table 1: Respondent Communications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Study Invitation</td>
</tr>
<tr>
<td>Survey Reminder 1</td>
</tr>
<tr>
<td>Survey Reminder 2</td>
</tr>
<tr>
<td>Survey Reminder 3</td>
</tr>
<tr>
<td>Survey Reminder 4</td>
</tr>
<tr>
<td>Survey Reminder 5</td>
</tr>
</tbody>
</table>

During the data collection phase of the study, students who had partially completed the survey and those who had not logged into the survey (non-responders) received reminder e-mails. Partial and non-responders could receive up to five reminder emails; these reminders included links to the survey, information about incentives offered, and encouragement for study participation.

Respondent Incentives

National Random Drawing Incentive

To encourage participation, students who completed the survey were entered into a random national sweepstakes drawing to win one of ten $100 gift cards; students were notified of their eligibility for the gift card drawing in the invitation.

School Specific Random Drawing

UNM included an additional random drawing for its students as part of the NCCS. The additional incentive items (and quantities) provided by UNM were:

- Starbucks $10 Gift Card (2)
- Dion’s $10 Gift Card (2)
- Golden Pride $10 Gift Card (4)
- Red UNM Baseball Cap (4)
- UNM Lanyard (7)
## Response Rates

### Table 2: Definitions of Terms

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eligible Sample (n)</td>
<td>Number of sampled participants who were eligible to participate in the survey after removing any ineligible cases (e.g., not a student as of the eligibility date, not 18 years of age or older, duplicate cases).</td>
</tr>
<tr>
<td>Complete Responses (I)</td>
<td>Number of sampled participants who consented to participate, navigated through the entire survey, and submitted their answers at the final question.</td>
</tr>
<tr>
<td>Partial Responses (P)</td>
<td>Number of sampled participants who consented but did not submit their answers at the final question.</td>
</tr>
<tr>
<td>Visitors (V)*</td>
<td>Number of sampled participants who logged into the survey but did not respond to the consent question.</td>
</tr>
<tr>
<td>Refusals (R)</td>
<td>Number of sampled participants who indicated that they did not want to participate in the survey by not consenting in the survey when asked, or by some other means.</td>
</tr>
<tr>
<td>Non-contact (NC)</td>
<td>Number of sampled participants where contact was never made.</td>
</tr>
<tr>
<td>Other Nonresponder (O)**</td>
<td>Number of sampled participants who did not respond, and do not fit into any other category above.</td>
</tr>
<tr>
<td>Unknown (UH and UO)**</td>
<td>Number of sampled participants with unknown household status or unknown eligibility.</td>
</tr>
</tbody>
</table>

*The NCCS differentiates between Visitors and Partial Responses: Visitors are treated as Refusals (R) in all response rate calculations.  
**The NCCS did not use these dispositions in the course of conducting data collection; however, they are defined here and in the following response rate calculation for ease of comparison with the AAPOR standards used.*
Response Rate Defined

As described in the definition of terms in Table 2 during the NCCS data collection, any respondent who consented to the survey was considered as a response in the response rate calculation. This included Completed Responses (I) and Partial Responses (P). Item missing data, resulting from a respondent’s refusals to answer specific questions were not considered in the definition of a response in the response rate calculations.

To ensure clarity and standardization of the response rate for this study, the American Association for Public Opinion Research (AAPOR) Standard Definitions for all response rate calculations were used. Specifically, this study used a standard response rate (AAPOR RR2), the calculation for which is shown in Figure 1.

Figure 1: AAPOR RR2 Formula

\[
RR2 = \frac{(I + P)}{(I + P) + (R + NC + O) + (UH + UO)}
\]

Completion Rate Defined

The completion rate, as displayed in Table 3, is a measure of the proportion of the number of responders who completed the survey over the number of responders who did not. This rate only considers those who have either Completed (I) or Partially Completed (P) the survey. It is calculated as shown in Figure 2. The CR was weighted in the same way as the response rate (RR2).

Figure 2: Completion Rate (CR) Formula

\[
CR = \frac{I}{I + P}
\]

Table 3: NCCS Response Rate

</tr>
</tbody>
</table>
RESULTS

Tables in this report summarize and show results grouped by key respondent attributes, namely, total sample, gender, and race. These tables present data in percentages; all numbers are rounded to one decimal place. The main report tables do not display statistically significant differences identified between groups; significance testing results can be found in Appendix 3 along with a full set of data tables for all NCCS questions.

Many other respondent characteristics exist that may influence the likelihood that an individual may experience a non-consensual or unwanted sexual experience. Some of these include: sexual identity (heterosexual vs. other), disability status (disabled vs. non-disabled), ethnicity/race, citizenship (foreign born vs. U.S. born), residence/housing location (on-campus vs. off-campus), and Greek system affiliation (Fraternity/Sorority member vs. non-Greek member). A brief analysis of such risk factors is provided in this report (see Risk Factor Analysis); additional analyses incorporating these variables can be conducted using the 2019 NCCS dataset.

Campus Resources

The first section of the survey asks students to report their knowledge of school policies, their overall feeling of safety on campus and their perception of how University of New Mexico views and handles sexual misconduct and assault incidents.

Students were asked whether they have received any training or attended any programs that provided education on sexual relationships or sexual misconduct. Overall, 93.8% of UNM students report that they have received training or attended a program since they started attending school. *(For a detailed list of all potential topics, see Appendix 3.)*
Sexual Experiences & Consent

In the Sexual Experiences section of the NCCS, students are asked a few questions about personal engagement in sexual activity within the past 12 months. 83.01% of students (84.19% females, 81.84% males) overall have engaged in some form of sexual activity – including kissing and fondling – within the past 12 months.

<table>
<thead>
<tr>

</tbody>
</table>

To help understand the potential associations between alcohol consumption, other drug use, and sexual behavior, the NCCS asks students to respond to three questions that link these concepts.

<table>

</tr>
<tr>
<td>…using drugs or other substances</td>
</tr>
</tbody>
</table>
Unwanted Sexual Experiences

To gain a picture of sexual misconduct and assault experiences, it is critical to understand the specific nature of the unwanted experience itself within the context of when and where the event took place. The NCCS asks respondents five sets of questions regarding different types of nonconsensual sexual experiences across three different timeframes. The five areas are: unwanted fondling, oral sex, vaginal penetration, any bodily penetration, and anal penetration. The three timeframes include: past 12 months, since enrolling at UNM, and entire lifetime.

The “any bodily penetration” question set is only asked if an individual self-identified as “transgender/gender non-conforming.” The total number of individuals in this category is less than 15; due to this extremely small sample – to ensure confidentiality and anonymity for all respondents – the “any bodily penetration” questions are not shown in this report and the “transgender/gender non-conforming” group is not used in any direct comparisons.

The NCCS uses “Past 12 Months” as its standard timeframe for most all measures collected in order to provide consistent responses for comparison purposes; thus, the survey responses capture the current climate regarding sexual misconduct within the campus community, and create an appropriate benchmark from which to measure change against future surveys. This standardized reference period not only allows for cohort comparison (based on year in school), it is also helpful in identifying changes over time with a given school experience and is crucial to evaluating the success of programs and policies aimed at reducing sexual misconduct and assault. In addition, the “Past 12 Months” measure tends to allow for better comparison to other data sources (such as institution reports, national survey data, etc.); to provide compatibility with other campus climate survey instruments, the NCCS also captures “Since Enrollment” and “Lifetime” versions for most measures.

Tables 15 – 21 summarize types of experiences during which nonconsensual sexual behaviors occurred. An asterisk “*” is used in cells to indicate when zero respondents reported “yes,” in these cases population estimates cannot be calculated. In addition, some respondents answered “don’t know” to questions regarding specific nonconsensual sexual experiences – the estimates presented in this report are based on the percentages of the total who answered “yes” to any of the questions. For brevity, tables show abbreviated versions of the questions asked in the survey; Table 14 details the complete survey language and the abbreviation used to reference each item.

As noted, the NCCS uses “Past 12 Months” as its standard timeframe for most measures collected in order to provide consistent responses for comparison purposes. Students are asked specifically about unwanted sexual experiences that have occurred within the past 12 months. Students are also asked whether they have had any unwanted sexual experiences at other times in their lives, specifically, the NCCS asks whether any incidents have occurred since they enrolled at their school or in their lifetime. Given the overlap in these timeframes, the columns shown in Table 26 are not mutually exclusive. The “Since Enrollment” time shows percentages of students who experienced an event that occurred longer than 12 months prior but since the individual has been a student at UNM (i.e., students who have been enrolled for more than 12 months), and students who indicate an event happened in past 12 months and who have been enrolled for less than 12 months. The “Lifetime” column shows total percentages of students who have had an unwanted sexual experience in the past 12 months, since enrollment, or at some point in their lifetime.

Sexual Harassment

Along with questions regarding specific unwanted sexual experiences that involved bodily contact, the Unwanted Sexual Experiences section of the survey also asks respondents about various forms of sexual harassment they may have encountered; Tables 27-28 summarize responses.

</table>
Repeated Harassment

Individuals who indicated that they had experienced some form of sexual harassment in the past 12 months were asked a follow-up question regarding whether all or some of these incidents involved the same person. 41.2% report that, yes, the same person was responsible for one or more harassment incidents; many people consider repeated sexual harassment by the same individual to be a form of stalking.

Perpetrator Details

The final group of questions related to Unwanted Sexual Experiences ask individuals who reported at least one nonconsensual sexual incident within the past 12 months to provide a few details about the perpetrator in the most recent event they experienced.

Table 29: Unwanted Sexual Experience Perpetrator Gender by Total Sample & Gender (% of all victims)

</tr>
<tr>
<td>Female Perpetrator</td>
<td>13.6</td>
<td>9.4</td>
<td>28.6</td>
<td>8.3</td>
</tr>
</tbody>
</table>

With respect to victims’ relationships to perpetrators, the most commonly cited are:

1. Ex-romantic partner: 17.5%
2. Stranger: 14.4%
3. Someone I met at a party, social event, or gathering: 13.4%
4. Non-romantic friend: 8.2%
5. Current romantic partner or spouse: 8.2%

Victims were also asked whether the perpetrator was in some way affiliated with University of New Mexico. 27.8% responded yes, the person responsible for the unwanted sexual behavior is affiliated with UNM. The top mentioned roles for school affiliated perpetrators are:

1. Student: 59.3%
2. Other: 14.8%
Propensity to Tell Others

Among the 7.6% of students who experienced at least one nonconsensual sexual incident within the past 12 months, 46.4% say they told someone about the incident. This means that 53.6% say they did not tell anyone about the incident.

Of those who did tell someone about the incident, the individuals most often told were:

1. Friend: 82.2%
2. Spouse or romantic partner: 26.7%
3. Roommate: 17.8%

Among the 53.6% who say that they did not tell anyone about their nonconsensual sexual incident(s), reasons for not telling someone about the incident include:

- Felt embarrassed or ashamed: 44.2%
- Blamed myself: 30.8%
- Did not want to get the person who did it in trouble: 17.3%
- Did not think anyone would do anything: 28.8%
- Did not think it was serious enough to report: 46.2%
- Concerns about consequences; legal, academic or otherwise: 23.1%
- Other: 9.6%

Official Reporting Behavior

Students who experienced at least one nonconsensual sexual incident within the past 12 months were asked whether they officially reported the incident(s) to law enforcement or to a school office or department. Tables 31-32 show the percentages of these students who reported an incident to an official agency or office and where they reported.

<table>

</tr>
</tbody>
</table>

*Professional includes (but is not limited to): medical doctor, nurse, counselor, therapist, or social worker.
Among the students who did not officially report the incident(s) to law enforcement or a school office, reasons for not officially reporting include:

- Felt embarrassed or ashamed: 38.9%
- Blamed myself: 27.4%
- Did not want to get the person who did it in trouble: 16.8%
- Did not think UNM would do anything: 21.1%
- Did not think it was serious enough to report: 64.2%
- Other: 13.7%
Sexual Assault Incident Location

Individuals who reported having a nonconsensual sexual experience in the past 12 months were asked where the event took place. The response options differentiate between on, near and off campus areas. “On-Campus” is defined as all University owned or managed property, “Near-Campus” is defined as areas within 1/2 mile (10 blocks) of campus, and “Off-Campus” is defined as areas further than 1/2 mile (10 blocks) of campus. Tables 33-34 summarize the results.

Partnered Relationship Issues

Students were asked if they were involved in a partnered relationship within the past 12 months. Partnered relationships as defined in this study include: casual relationships, repeated or regular hook-ups, steady or serious relationships and marriage, civil union domestic partnership or cohabitation. All who responded affirmatively to this question were asked a series of questions regarding possible negative domestic experiences. Tables 35-36 summarize the responses.

Sexual Misconduct Incident Bystander Behavior

All students were asked about their own behavior in situations where sexual misconduct or assault could - or did - result.

Risk Factor Analysis

Overall, a few significant differences emerged regarding unwanted sexual misconduct experiences among University of New Mexico graduate students. Findings of note include:

REGARDING FONDLING

- Female graduate students were significantly more likely than males to report experiencing unwanted fondling at some point within the past 12 months, since enrollment at UNM, and during their lifetimes.
- Non-heterosexual graduate students were more likely than heterosexuals to report experiencing unwanted fondling at some point within the past 12 months, since enrollment at UNM, and during their lifetimes.

REGARDING UNWANTED EXPERIENCES

- Females are more likely than males to report having had a non-consensual fondling, oral, or anal, sexual experience during their lifetimes, and are also more likely than males to say they have had unwanted fondling or oral experiences since enrollment.
- Among those who had an unwanted sexual experience within the past 12 months, female graduate students were more likely than males to say that the experience included verbal pressuring and/or being taken advantage of while drunk or on drugs.
- Females, nonheterosexuals, individuals with a disability, and those born in the U.S. were more likely than males, heterosexuals, individuals with a disability, and those born outside the U.S. to report:
  - having an unwanted sexual experience of any type (fondling, oral, vaginal, or anal) during their lifetimes.
  - experiencing some form of intimate partner violence (IPV) during their lifetimes.

REGARDING SEXUAL HARASSMENT

Females are more likely than males to report having experienced some form of sexual harassment within the past 12 months, since enrollment, and/or during their lifetime. In particular, females are significantly more likely than males to report that during the past 12 months someone:

- Stared at them in a sexual way or looked at the sexual parts of their body after they asked them to stop
- Made teasing comments of a sexual nature about their body or appearance after they asked them to stop
- Sent them sexual or obscene materials such as pictures, jokes, or stories in the mail, by text, or over the internet after they asked them to stop
- Made sexual motions, such as grabbing their crotch, pretending to masturbate, or imitating oral sex without their consent
WITH RESPECT TO POLICIES AND REPORTING:

- While nine out of ten (90.1%) of UNM graduate students say that they know UNM has a local policy regarding sexual misconduct, fewer than seven out of ten (68%) say that they know where to find/read the local sexual misconduct policy.
- Male graduate students are more likely than females to say that they know where to find/read the UNM local sexual misconduct policy.
- Males and females agree that UNM responds fairly to sexual misconduct complaints, but male graduate students are more likely than females to agree that they:
  - Feel relatively safe from sexual misconduct at UNM;
  - Are aware of UNM’s process to address sexual misconduct complaints;
  - Think UNM takes sexual misconduct complaints seriously.
- Males are significantly more likely than females to agree that:
  - They are aware of UNM’s process to address misconduct complaints;
  - UNM takes sexual misconduct complaints seriously; and
  - They feel relatively safe from sexual misconduct at UNM.
- Heterosexuals, individuals who do not have a disability, and those who were not born in the U.S. are significantly more likely than non-heterosexuals, individuals with a disability, and those born in the U.S. to agree that:
  - They are aware of UNM’s process to address misconduct complaints;
  - UNM takes sexual misconduct complaints seriously; and
  - They feel relatively safe from sexual misconduct at UNM.
- Males are significantly more likely than females to agree that UNM:
  - Takes training in sexual assault prevention seriously; and
  - Is doing a good job of providing needed services to those who have experienced sexual assault.
- Heterosexuals, individuals who do not have a disability, and those who were not born in the U.S. are significantly more likely than non-heterosexuals, individuals with a disability, and those born in the U.S. to agree that UNM:
  - Takes training in sexual assault prevention seriously;
  - Is doing a good job of educating students about sexual assault;
  - Is doing a good job of trying to prevent sexual assault from happening; and
  - Is doing a good job of providing needed services to those who have experienced sexual assault.
- Males are significantly more likely than females to agree that - if they were sexually assaulted - UNM would:
  - Protect their privacy; and
  - Enable them to continue their education without having to interact with their assailant.
- Heterosexuals, individuals who do not have a disability, and those who were not born in the U.S. are significantly more likely than non-heterosexuals, individuals with a disability, and those born in the U.S. to agree that - if they were sexually assaulted - UNM would:
  - Take their case seriously;
  - Protect their privacy;
  - Treat them with dignity and respect; and
  - Enable them to continue their education without having to interact with their assailant.
Use of Findings and Next Steps

The results of this survey underscore the importance of regularly collecting data to inform UNM about student experiences surrounding sexual conduct. Further analyses of survey results may be warranted to inform the work of UNM offices in developing enhanced education and prevention efforts, to ensure that ample support is available, and to bridge gaps in knowledge and/or understanding of all resources available.
SUPPLEMENTAL REPORT INFORMATION

Confidentiality

To ensure success of this survey, given the sensitive nature of several of the questions, a key element of the study design was to limit direct access between University of New Mexico employees and students who were being surveyed. Integral to this effort was the use of an independent contractor (SoundRocket) for data collection efforts; this provided a firewall between respondents’ identity and their survey responses. Consistent with standard practices for cross-sectional data collections such as this, SoundRocket was required to use encryption technologies (including SSL for all web-based interfaces) and adhere to strict guidelines to maintain data security and confidentiality. SoundRocket has been collecting sensitive data from college student populations for over 10 years. Communications, staff training, processes and quality inspections all focused on minimizing disclosure risk. SoundRocket agreed to be held to the same standards prescribed by the University of New Mexico IRB to protect respondents before, during and after this study.

After the sample list for the study was provided to SoundRocket, no University of New Mexico employee ever came into contact with any identifying information on any potential survey respondent in a way that would allow them to link survey responses to individual identity. Only SoundRocket employees could access survey records containing identifying information during data collection; this was necessary to monitor response rates and to respond to support calls and inquiries. Interviewers were only provided with a name and phone number for non-responding participants; interviewers could not access any survey data. These facts were openly disclosed during contacts with respondents to assure them that their responses would not be linked back to them. After the study was completed, SoundRocket destroyed all identifiable data (electronic and paper) that was received during the course of the effort.
Report & School Specific Terminology

The NCCS survey and report use standard terms and designations. Schools may substitute their own terms and designations if desired so that data gathered references specific programs, resources, offices, etc. that are offered by or located at the school. Table 39 shows the standard NCCS terminology along with the terms selected for use by UNM for the survey and report.
